

House-mouse t-complex: arrangement-state-conditioned genealogy and quartet distortion

A. STANDARD_ONLY
Q_SPECIES

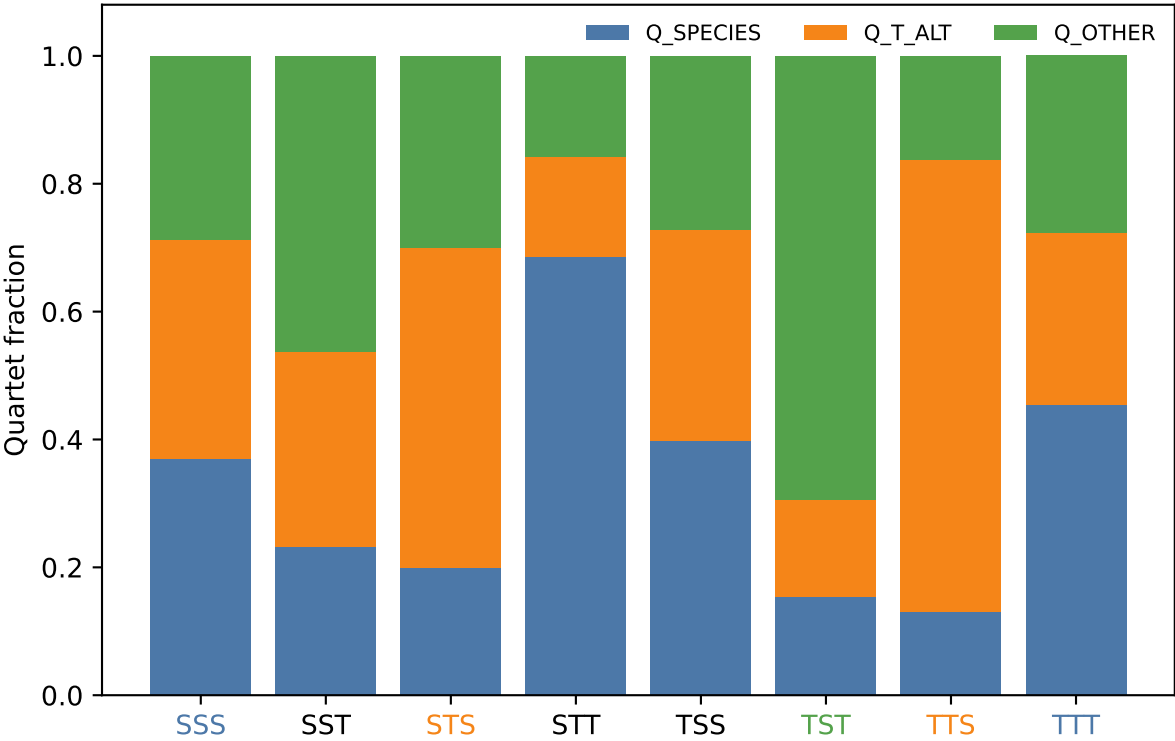

CU = 0.056283; localPP = 0.999985

ALL_TIPS
Q_T_ALT

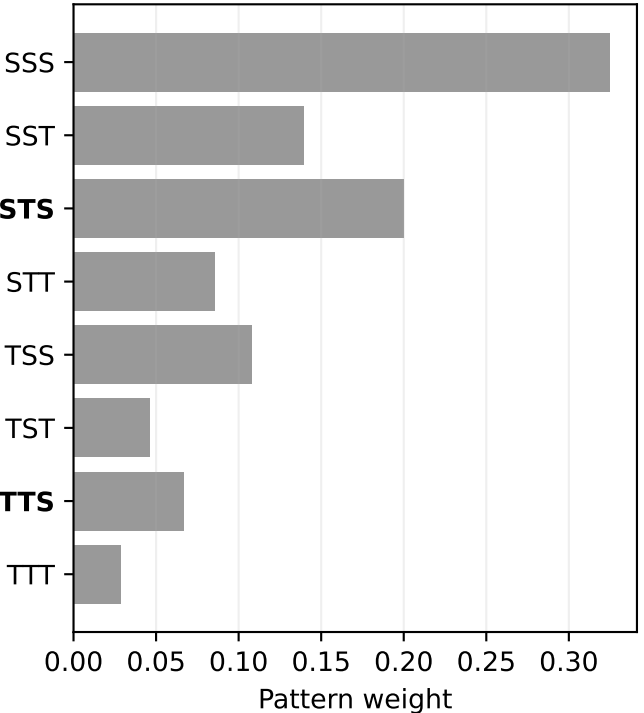

CU = 0.049097; localPP = 1.000000

B. Exact arrangement-state quartet composition

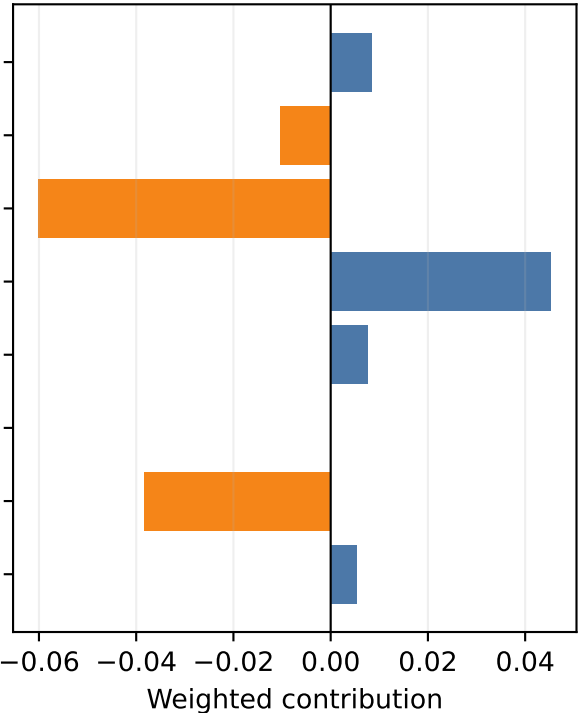

Mixed-state quartets = 64.6%

Pattern frequency

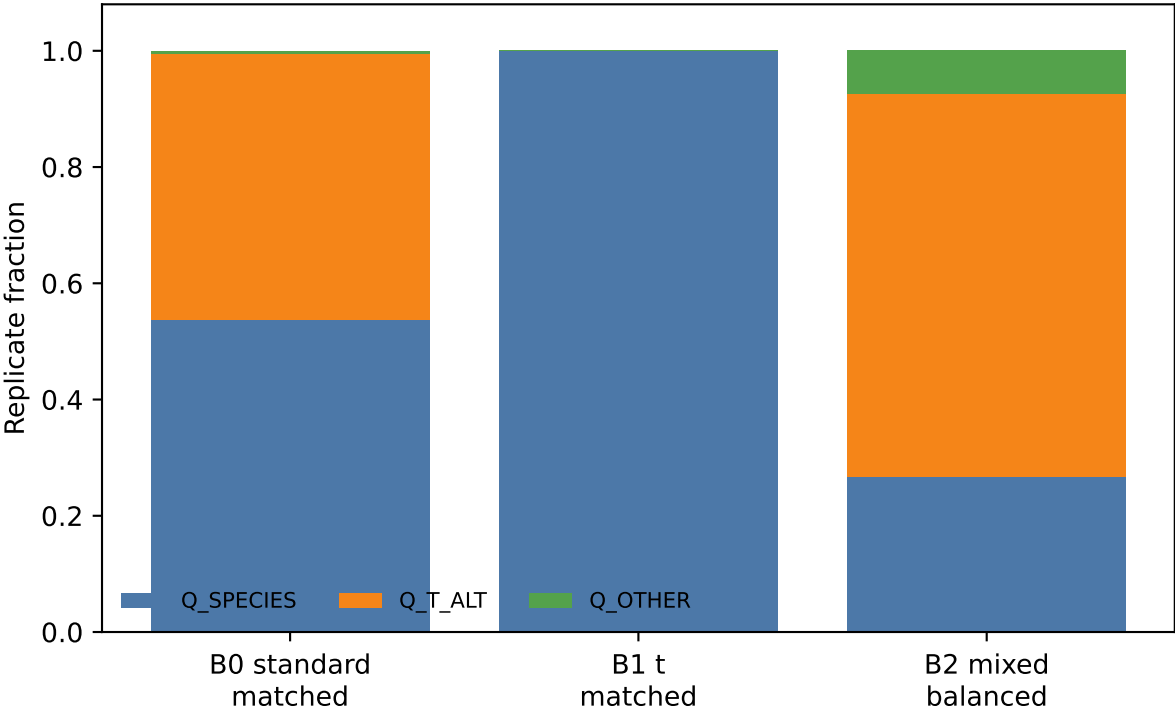

Contribution to $\Delta = q_{\text{species}} - q_{\text{t_alt}}$

negative $\Delta \rightarrow Q_T_ALT$; positive $\Delta \rightarrow Q_SPECIES$

D. Mixed-state sampling shifts outcomes toward Q_T_ALT

B2 composition-balanced; total sample size differs from B0/B1
